

City Gold Mine

Add a gold touch to your business

City Gold Mine

Add a gold touch to your business

A City Gold Mine will get your customers panning for gold while giving your business a unique boost.

The City Gold Mine installation is available in various sizes, ranging from a small gold mine to a whole mining village.

Each installation is unique. We will design and plan a solution based on your specific needs and preferences.

All installations are built for maximum durability and designed to look like an old mine system with panning troughs. The parts are made of durable wood, steel and fibreglass. All accessories are included for a complete gold panning experience.

A large City Gold Mine with a complete set of parts including a water tank, wind-powered pump, water wheel, wooden troughs, water barrels, mining wagons, rails, photo spot and a wooden fence with ropes and netting requires an area of at least 200 m². A smaller installation with fewer features will fit into an area of 50 m².

We will install and test the Gold Mine at your facility and train your staff in gold panning so they can assist your customers.

Starter package

A City Gold Mine installation comes complete with everything you need to start receiving guests at your facility immediately.

When you buy a City Gold Mine, a starter kit that we deliver and install is always included. You can choose to buy devices from our product line below.
